

Scrub, Heathland and Coastal Complexes

SRE Eastern riparian scrub

Community Description:

Eastern riparian scrub is found along creeks and rivers of the Tasmanian mainland from sea level to 600 m within the Northern Midlands, Ben Lomond, Flinders and Tasmanian South East Bioregions. The structure and floristics of SRE are variable depending on hydrological and other disturbance regimes, however indicative species include *Micrantheum hexandrum*, *Leptospermum lanigerum*, *Grevillea australis and Spyridium lawrencei*. This is the appropriate benchmark to use in assessing the condition of the eastern distribution of the listed *Riparian scrub* community (Schedule 3A, *Nature Conservation Act 2002*).
